

Mawuli Badassou

DevOps & Data Engineer | AWS Certified Solutions Architect

Accra, Ghana | +233 244 065 972 | mawulibadassou5@gmail.com | [Linkedin](#)

SUMMARY

DevOps and data engineer with 2+ years of experience spanning cloud infrastructure and production data pipelines. Automates AWS infrastructure with IaC (Terraform, CloudFormation), CI/CD and observability, and builds and tunes Spark pipelines for a financial services data platform. Background in backend development supports direct collaboration across engineering teams.

TECHNICAL SKILLS

Cloud & IaC: AWS, Azure, Terraform, CloudFormation

CI/CD: GitHub Actions, Jenkins, GitLab CI/CD

Configuration Management: Ansible

Monitoring & Observability: Prometheus, Grafana, Jaeger

Containers: Docker

Messaging: Kafka

Programming & Scripting: Python (FastAPI), Bash, SQL

Databases: PostgreSQL, DynamoDB

Data Engineering: Apache Spark, ETL pipelines, AWS EMR, Athena

PROFESSIONAL EXPERIENCE

AmaliTech – DevOps Engineer

January 2025 – Present

- Built core extractors and business logic for the Spark ETL pipeline behind a financial services data product; took the management fees engine end to end, validated against the legacy system on over 99% of checks.
- Halved pipeline runtime, 218 to ~105 minutes, by profiling where time was spent, narrowing a shared dataset from 377 to ~147 columns, and consolidating 103 extractors to ~40.
- Diagnosed defects that were silently dropping data, including a shared-attribute collision that made extractors read the wrong source columns; added guard tests blocking the whole bug class.
- Deputized for the data team lead during absences and reviewed team pull requests, flagging issues before merge.
- Restructured and fully imported a multi-environment (dev/staging/prod) AWS infrastructure into Terraform, with Ansible for post-provisioning configuration; built a reusable modules library used across all cloud accounts.
- Set up Prometheus and Grafana for production monitoring; diagnosed a critical outage by tracing a memory leak through metrics and logs, coordinated the fix with the backend team, and added service-level CPU/memory limits and alerting to prevent recurrence.
- Designed and validated a disaster recovery strategy: configured deletion protection, DynamoDB backups, and AWS Backup; ran a full DR simulation achieving RTO of 16 min (target: 20 min) with RPO of 24 hours.
- Automated dev/staging environment shutdowns outside business hours, cutting compute costs by ~45–50%.

AmaliTech – Software Developer

October 2024 – December 2024

- Built backend services with Python and FastAPI; contributed to a full-stack Spring Boot and Angular project on AWS.

EDUCATION & CERTIFICATIONS

- University of Ghana – BSc Computer Science (2019–2023)
- AWS Certified: Solutions Architect – Associate, Developer – Associate, Cloud Practitioner
- Microsoft Certified: Azure Administrator Associate | KCNA: Kubernetes and Cloud Native Associate
