

Mawuli Badassou

DevOps Engineer | AWS Certified Solutions Architect

Accra, Ghana | +233 244 065 972 | mawulibadassou5@gmail.com | [Linkedin](#)

SUMMARY

DevOps Engineer with 2+ years of experience designing and automating cloud infrastructure on AWS, with a background in backend development that enables direct collaboration across engineering teams. Proficient in IaC (Terraform, CloudFormation), CI/CD pipelines, and production observability. AWS Certified Solutions Architect – Associate.

TECHNICAL SKILLS

Cloud & IaC: AWS, Terraform, CloudFormation

CI/CD: GitHub Actions, Jenkins, GitLab CI/CD

Configuration Management: Ansible

Monitoring & Observability: Prometheus, Grafana, Jaeger

Containers: Docker

Messaging: Kafka

Programming & Scripting: Python (FastAPI), Bash, SQL

Databases: PostgreSQL, DynamoDB

PROFESSIONAL EXPERIENCE

AmaliTech – DevOps Engineer

January 2025 – Present

- Restructured and fully imported a multi-environment (dev/staging/prod) AWS infrastructure into Terraform; built a reusable modules library to standardize and accelerate infrastructure provisioning across all cloud accounts.
- Set up Prometheus and Grafana for production monitoring; diagnosed a critical outage by tracing a memory leak through metrics and logs, coordinated the fix with the backend team, and added service-level CPU/memory limits and alerting to prevent recurrence.
- Built custom Grafana dashboards tracking API Gateway metrics — request rate, response time, response size, and rate limit violations — with threshold-based alerting to surface performance issues early.
- Deployed Jaeger for distributed tracing, providing end-to-end visibility into request flows across services and making latency bottlenecks and failure points traceable.
- Designed and validated a disaster recovery strategy: configured deletion protection, DynamoDB backups, and AWS Backup; ran a full DR simulation achieving RTO of 16 min (target: 20 min) with RPO of 24 hours.
- Cleared a storage crisis on production instances — from 90–93% down to 53–55% — by purging stale deployment artifacts and tightening revision retention, preventing future deployment failures.
- Introduced Ansible for post-provisioning configuration, automating Nginx/SSL setup, package installs, and environment variable management across environments and eliminating manual SSH access.
- Integrated database migration execution into the CI/CD build phase, ensuring schema changes are applied before application startup and preventing environment drift.
- Migrated the production email system to AWS SES and refactored the sending layer with connection pooling and parallel processing, improving throughput and removing reliability bottlenecks.
- Automated dev/staging environment shutdowns outside business hours, cutting compute costs by ~45–50%.

AmaliTech – Software Developer

October 2024 – December 2024

- Built backend services with Python and FastAPI; contributed to a full-stack Java Spring Boot and Angular project deployed on AWS, gaining hands-on experience across the stack before moving into DevOps.

EDUCATION & CERTIFICATIONS

- University of Ghana – BSc Computer Science (2019–2023)
- AWS Certified Solutions Architect – Associate
- AWS Certified Cloud Practitioner
